# Logic Building Assignment : 11

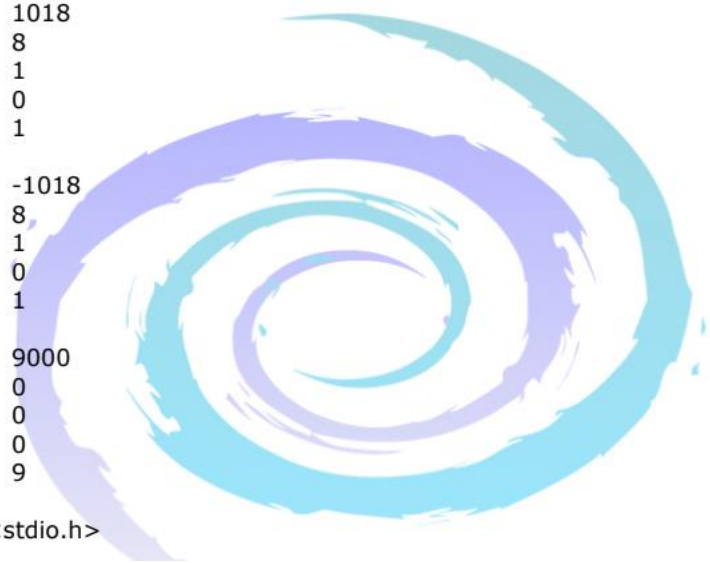
1. Write a program which accept number from user and display its digits in reverse order.

```
Input :   2395
Output :  5
          9
          3
          2

Input :   1018
Output :  8
          1
          0
          1

Input :   -1018
Output :  8
          1
          0
          1

Input :   9000
Output :  0
          0
          0
          9
```



```
#include<stdio.h>
```

```
void DisplayDigit(int iNo)
{
	int iDigit = 0;

	if(_________)
	{
		iNo = -iNo;
	}

	while(_______)
	{
		iDigit = _______________;
		printf("%d",iDigit);
		_______ = ______ / _______;
	}

}

int main()
{
	int iValue = 0;

	printf("Enter number");
	scanf("%d",&iValue);

	DisplayDigit(iValue);

	return 0;
}
```

2. Write a program which accept number from user and check whether it contains 0 in it or not.

Input : 2395
Output : There is no Zero

Input : 1018
Output : It Contains Zero

Input : 9000
Output : It Contains Zero

Input : 10687
Output : It Contains Zero

```
#include<stdio.h>

#define TRUE 1
#define FALSE 0

typedef int BOOL;

BOOL ChkZero(int iNo)
{
	// Logic
}

int main()
{
	int iValue = 0;
	BOOL bRet = FALSE;

	printf("Enter number");
```

```
        scanf("%d",&iValue);

        bRet = ChkZero(iValue);

        if(bRet == TRUE)
        {
                printf("It Contains Zero");
        }
        else
        {
                printf("There is no Zero")
        }

        return 0;
}
```

3. Write a program which accept number from user and count frequency of 2 in it.

```
Input :     2395
Output :    1

Input :     1018
Output :    0

Input :     9000
Output :    0

Input :     922432
Output :    3

#include<stdio.h>

int CountTwo(int iNo)
{
        // Logic
}
```

```
int main()
{
        int iValue = 0;
        int bRet = 0;

        printf("Enter number");
        scanf("%d",&iValue);

        iRet = CountTwo(iValue);
```

```
	printf("%d",iRet);

	return 0;
}
```

4.Write a program which accept number from user and count frequency of 4 in it.

```
Input :	2395
Output :	0

Input :	1018
Output :	0

Input :	9440
Output :	2

Input :	922432
Output :	1

#include<stdio.h>

int CountFour(int iNo)
{
	// Logic
}

int main()
{
	int iValue = 0;
	int iRet = 0;

	printf("Enter number");
	scanf("%d",&iValue);

	iRet = CountFour(iValue);

	printf("%d",iRet);

	return 0;
}
```

5. Write a program which accept number from user and count frequency of such a digits which are less than 6.

Input : 2395
Output : 3

Input : 1018
Output : 3

Input : 9440
Output : 3

Input : 96672
Output : 1

```
#include<stdio.h>

int Count(int iNo)
{
	// Logic
}

int main()
{
	int iValue = 0;
	int iRet = 0;

	printf("Enter number");
	scanf("%d",&iValue);

	iRet = Count(iValue);

	printf("%d",iRet);

	return 0;
}
```
